

## INSTALLATION PROCEDURE

### (Internet Explorer)

#### Step 1:

First you have to find whether the user account is having Administrator rights or not.

#### Step 2:

If it is having administrator rights to install the program, you follow the link "Rights Allowed User Accounts". If not, follow the link "Rights Restricted User Accounts". There will be available separate installation procedure for both type user accounts.

#### Step 3:

If you are unable to find about admin rights, follow the "Rights Allowed User Accounts" and install it. When you are not allowed to install by this, come back and try with "Rights Restricted User Accounts". If both methods are working not working, set the home page using Explorer shortcut properties which are given in below.

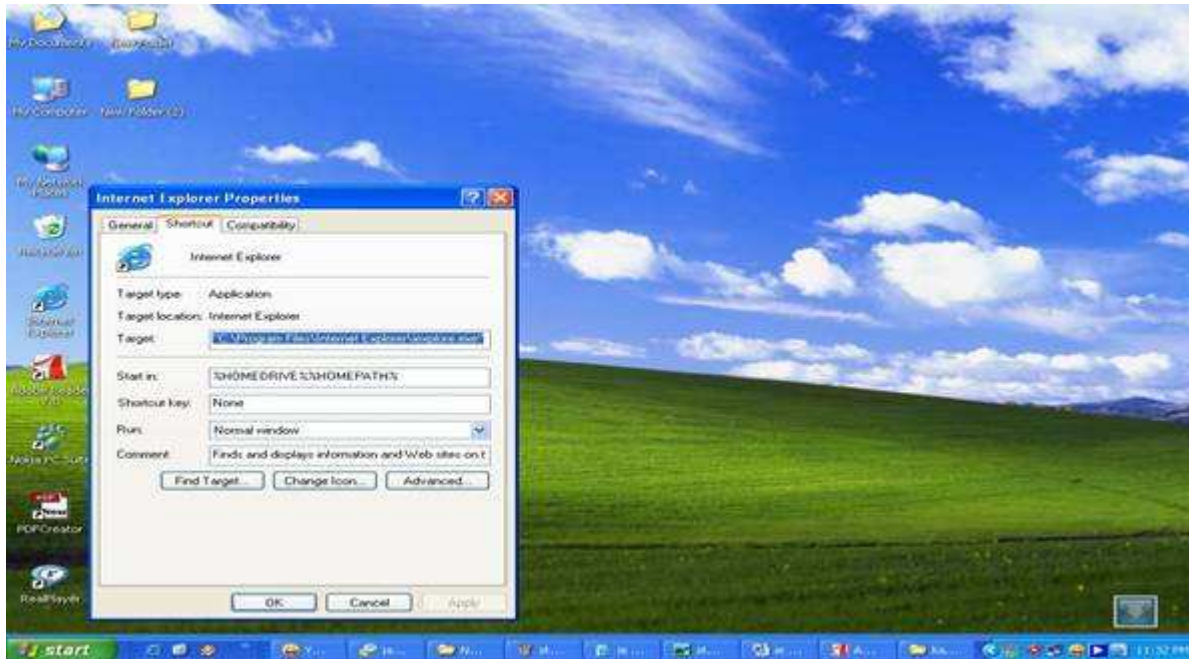

### STEP 1

Right click on Explorer short cut and select "Properties"

### STEP 2

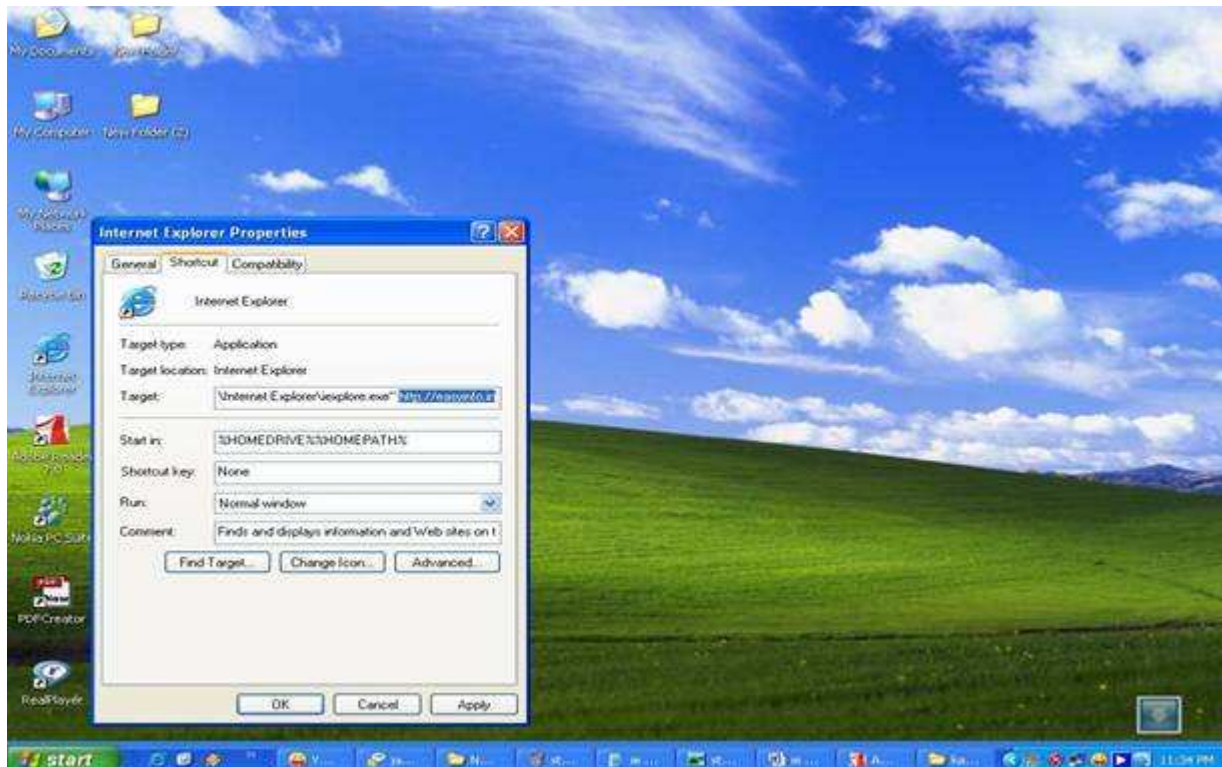

In "Properties" go to "target"

### STEP 3

In Target column " " within this apostrophes some path be there.

After this " " leave one space then type full website address what we have to set.

After this you have to give apply.

#### STEP 4

Then you have to follow all the procedure for quick launch menu.

Right click explorer shortcut and select properties and follow above the steps from step 2.

Open an "Internet Explorer" and check our default Home page is working or not. If working "Restart" the system and check it in "Internet Explorer" Home page setting again. And also the options should be disabled which has to use to change the default home page.
